

(Some) Model Rules

1. A category has many articles. An article belongs to a single category.
 2. An user creates and modifies any number of articles.
 3. An article can be displayed as an instance chosen from its own list of versions.
 4. An *instance of the article* (i.e. **Version**) contains more chapters and a collection of images (which are to be displayed at the article's ending section as a carousel maybe).
 5. A new version of an article is created when 1 chapter is changed / added / removed
 6. A new version of an article is created when 1 image is added / removed.
- Obs: In case of rule 5. the Version's field "changedImageId" will be null. The same applies for "changedChapterId" for rule 7.
7. Creating a new article implies the Version's fields "changedChapterId" and "changedImageId" being null for the first version.
 8. Each time an user edits an article, he will be asked to type a short description for the change he made within that Version.
