

(Some) Model Rules

1. A category has many articles. An article belongs to a single category.
2. An user creates and modifies any number of articles.
3. An article can be displayed as an instance from its own list of versions (precisely as the last added version).
4. *An instance of the article* (i.e. **Version**) contains more chapters.
5. A new version of an article is created when 1 chapter is changed / added / removed
6. Creating a new article implies the Version's field "changedChapterId" being null for the first version.
7. Each time an user edits an article, he will be asked to type a short description for the change he made within that Version.
8. If the admin reverts to an old version of an article, all the posterior versions to the chosen one will be deleted.
9. An article can be set as "protected" by its owner or any moderator, so that unregistered users cannot edit its content.
10. An article can be "frozen" by the admin, so that nobody (except the admin) can edit or revert any changes to the article.
